Herbs

Let's consider these facts. Herbs have been around forever, they grow naturally and they have been used for healing for centuries. Drugs are synthetic chemical reproductions sold by the large pharmaceutical corporations at highly inflated prices. Doctors receive less than 3 hours of instruction on nutrition, eating right and preventative medicine in their entire 4-6 years of training.

Luis Pasteur, shortly before he died, stated that he was possibly mistaken about his germ theory. He said that germs and viruses might be the result of the disease instead of the cause. The way this could be explained is that the body overloads on toxic build-up and produces symptoms of stress, then necessary bacteria or viruses move in to scavenge the toxins, creating an abundance of these in the system, and leaving a super toxic waste by-product behind, which the body has a difficult time expelling. Therefore the presence of the virus or high bacteria count is a result of the disease and not the cause. A couple of very important things to realize when considering this possibility are : 1. A person does not need to be exposed to another individual to come down with a cold. People living in small communities with no outside exposure can come down with colds and disease. 2. People with no disease can sleep with people and exchange bodily fluids with people with HIV and not be infected. Considering these facts further weakens the Germ Theory of Disease. If this information is true, then the introduction of prescription and pharmaceutical drugs would only serve to mask the symptoms of the problem and slowly destroy the immune system since these drugs are highly toxic.

There have been several cures for cancer and other diseases but these have been viciously suppressed by the establishment and pharmaceutical industry. Some of these include Raymond Rife and the Rife Microscope, Harry Hoxsey, Cancell, Essiac, and Ozone. The latest and most promising information so far comes from a woman named Dr. Hulda Clark. Her books and research have just been published this year. She states that the age-long problem and cause of diseases are parasites, Worms in particular. There is a worm, an intestinal fluke, which exists in most people throughout their lives. Generally, it is excreted by the body in the younger stages and does not grow into an adult in our bodies. But, something different happens when substances like Benzene and Propyl Alcohol are abundant in our body. These toxic chemicals are consumed in the form of carbonated sodas and extracts and they are absorbed into our skin in hair and body care products. The abundance of propyl Alcohols break down the shells of the eggs allowing them to hatch early.

The build-up of these toxic substances weakens the immunity of certain organs or areas of the body (Thyroid, Lymph, skin), allowing worms to grow in these areas. Dr. Clark has diagnosed hundreds of people with both Cancer and AIDS and found that all of them had both the worm present and the weakened immunity from one of these toxic sources. She was also successful curing all of them with the three herbs that are necessary to kill the worms. She does claim though that some people that are very close to death may be too far gone from the severe burden of over-toxicity. We will see how long it takes for the general public to find out about this. We have already spoken to people in different states that have used her methods successfully. Even if people do find out about things one way or another, the average person will not even know that people are finding out about something because the media will not televise it and tell people certain things.

The neurophone hearing device

http://www.geocities.com/CapeCanaveral/Campus/2289/webpage.htm

Patrick Flanagan's neurophone is a hearing device which allows the profoundly deaf to hear by transferring sounds directly into the minds of the deaf person, thus bypassing the ears.

However, this technology is currently being suppressed by the US government. Seems some of their electronic mind control programs, which work on a similar principle, might be compromised if this technology becomes widely known. See patent number 3,647,970.

Wouldn't want the public finding out they are being mind controlled ...right?

Beauchamp

http://www.sumeria.net/bechamp/bechamp.html

Introduction

Bechamp was one of France's most prominent and active researchers and biologists. He taught in universities and medical schools, and published widely on cell biology, disease, botany and related subjects.

His would probably be a household name today if it wasn't for the activities of one Louis Pasteur, who history has treated very kindly indeed, considering his fake science, his tendency to steal ideas (mainly from Bechamp), falsify experimental data, and in general make claims which had no basis in fact.

The Third Element of the Blood

(Out of Print)
by *Antoine Bechamp*
http://www.sumeria.net/books/blood.html

This book is the last work by a man who should today be regarded as one of the founders of modern medicine and biology and who deserves a place as one of the giants of the history of science. History, however, is written by the winners; the career of Antoine Bechamp, and the manner in which both he and his work have been written out of history, bear witness to the truth of this statement.

ESSIAC

Essiac:(ess-ee-ack):

http://www.cancer-info.com/essiac.htm

Non commercial information about essiac, a herbal tea which was originally prepared by Rene Caisse, for educational purposes only. A good essiac in our opinion is the favored alternative medicine for cancer over all other alternative medicines. If you are looking for alternative medicines to compliment your cancer care, essiac should be your very first choice.
Essiac is the worlds most popular alternative medicine for cancer and when used properly, may indeed be very beneficial to cancer patients.
Essiac consists of 4 - 6 *safe* medicinal herbs that are boiled in correct proportions to make a herbal tea that assists the body in combating cancer and the side effects of cancer treatments, including chemotherapy and radiation side effects. After 75 years of anecdotal reports from thousands of users of essiac, no known side effects are attributed to essiac.

http://www.sumeria.net/health/essiac.html
What price truth? The medical monopoly and government proclaim to have spent billions in search of a cure for cancer. Except for the jobs created, the "War on Cancer" has been an utter flop.

Pasteur Exposed:
The False Foundations of Modern Medicine

by Ethel Douglas Hume
http://www.pnc.com.au/~cafmr/reviews2.html#pasteur

This is a modern edition of a manuscript first published in 1923 previously entitled BECHAMP OR PASTEUR?. The author has sought to show Pasteur and his ideas as being those of a charlatan by presenting the much suppressed work of Professor Antoine Bechamp.

In reading this book, the hero of orthodox medicine, Pasteur, has been exposed as a "chemist who, without ever being a doctor, dared nothing less than to profess to revolutionise medicine." His goal of personal success dominated his ego. He attained his desires through forcefulness and tenacity. In doing so he put aside all tenderness and love of life, coldly carrying out barbaric atrocities on animals to 'prove' his theories.

In contrast, Bechamp was a man of incredible love and respect for all life. He was not motivated by self elevation. His passion was to seek the Truth and this was the inspiration behind his work.

We are indebted to Bechamp for the first scientific evidence that life and health was dependent on "energy". This has furthered Hahnemann's work [Hahnemann is the father of homoeopathy] and endorsed the practice of homoeopathy and other therapies dependent on "energy" such as acupuncture. However, it met with unpopularity because it firmly disproved the germ theory, especially vaccination, promoted by Pasteur.

Bechamp's work was negated and almost lost through Pasteur's denunciation of any rival work. It was saved by Dr Leverson who, in America, was far enough removed, at that time, to be influenced by the cult worship of Pasteur. Inspired by Bechamp's written accounts of his experiments, he travelled to France to meet the great man only a few months before Bechamp died.

Again Bechamp's work may have disappeared if Leverson had not met the author, Ethel Douglas Hume, at a meeting. She took on the task of documenting all the notes and writings. This manuscript went through four editions by the original publisher and again appeared to be doomed to obscurity.

The present publisher of this work came across the last remaining copy in 1989 in the library of the London Homoeopathic Society. He also was so strongly inspired by its contents that he immediately set about making it easily obtainable to all of us who know there is another approach to health than the system we have to endure. It arms us with ammunition to retaliate against those who seek to discredit the effectiveness of homoeopathy.

The Medical Authorities, since Pasteur's time, have continued to mistake his fraudulent compulsion for greatness with scientific advancement. And, in doing so, not only have hindered but also denied the trully great work carried out by less arrogant scientists such as Bechamp. They have jealously guarded the dictum of their hero rejecting any possibility that there may be a safer, more ethical, alternative.

Has Medical Science matured enough to admit the possibility that their work has followed the wrong direction since Pasteur? Is it strong enough to accept the responsibility of its mistakes? Will it work to rectify the errors and bring positive changes to medicine irregardless of the blame cast and the power of money hungry egotists and drug corporations?

This book will convince the reader that it is imperative that attitudes to health care change now before more innocent suffer in the futility of the present conventional approach.

Suppressed inventions and other discoveries (book)
by Jonathan Eisen
http://www.nutech2000.com.au/prod12.htm
Jonathan Eisen has collected over forty intriguing stories of scientific cover-ups and programs of misinformation concocted to conceal some of the most phenomenal innovations in mankind's history. 'Suppressed Inventions and Other Discoveries' presents documented evidence that corporate self-interest, scientific arrogance, and political savvy have contrived to keep us in the dark about technological breakthroughs or interplanetary contact that may shift the current balance of power. 'Suppressed Inventions and Other Discoveries' begins by examining the ties that bind the medical establishment to powerful pharmaceutical corporations.

2 dozen suppressed cancer treatments
http://www.dstc.edu.au/ListArchives/oi/archive/2001/03/msg00009.html
NEXUS Magazine is not a conspiracy magazine. We do however cover subjects and stories that often cause the reader to assume there has been a conspiracy. For example, we have found evidence of at least two dozen very successful treatments for cancer that have been suppressed! This suppression has always stemmed from joint action between medical bureaucracies and pharmaceutical drug companies. Cancer can, has and is being successfully cured by a wide variety of treatments - all studiously ignored and denigrated by the majority of doctors.

Will this natural asthma cure also be suppressed?

http://aca.ninemsn.com.au/stories/953.asp

Asthmastop: trials claim to ease the wheeze
14 June 2002
Reporter: Ros Thomas

An asthma treatment which uses natural products is currently laying claim to being one of the biggest breakthroughs in decades even though it hasn't yet been approved by the Therapeutic Goods Association, nor has it been tested through clinical trials. ACA talks to the people behind it.

Asthmastop is the new venture of Perth entrepreneur, Kevin Parry - the man who bankrolled our defence of the America's Cup in the late 1980s. Parry says Asthmastop is made out of a group of natural products that have special benefits for the body and treats asthma, "from the stomach and liver up". He's also prepared to say that the trialists using the product not longer carry their puffers with them. Asthmastop is the brainchild of clinical nutritionist Kay Whyte who set about inventing a formula to strengthen her son's lungs when she discovered he was allergic to Ventolin.

Kay's son Phillip, now 11, takes one Asthmastop capsule a day and has been asthma-free for almost eight years. "It's not a magic cure, and we wouldn't advocate that. Some people have had a reduction in their asthma in two days, some a week, and some have taken a month," says Kay.

Kay says that after having "perfected" the medication over 10 years, she would like to make it available to other asthmatics. But not everyone is convinced this product is robust enough to take to market. Dr Steve Stick is the head of Respiratory Medicine at Perth's leading hospital for children and says the makers and promoters of Asthmastop are heading into dangerously unchartered waters. Dr Stick says no one knows if it's actually a valid and safe treatment for asthma, "because it hasn't been investigated to see if it's effective and it hasn't been evaluated to see if it's safe in patients - because none of them [Asthmastop trialists] have actually been put through the rigours of clinical trial."

"My greatest concern is that people will go off their tried and tested preventative medications and suffer a serious or catastrophic asthma attack," says Dr Stick. Kevin Parry says they've trialed the product on 40 volunteers and he provided ACA with the test results from Curtin University's School of Pharmacy which concluded that at a recommended dosage Asthmastop, "should be perfectly safe for any person who is not suffering kidney disease."

However the university told A Current Affair it was never supplied with the capsules themselves for testing, only a list of the ingredients Asthmastop is said to contain. The Asthmastop website is http://www.asthmastop.com/main.asp

Suppression of cures

Unfortunately, good science will not be enough. We're not trying to overcome PR alone, we're trying to overcome money, and lot's of it. According to Kenneth Feather, head of surveillance and enforcement for the Food and Drug Administration's drug marketing division:

> "Its probably shocking to people who don't know, to know out the almost total control that the pharmaceutical industry has over the flow of medical information."

$13,000 per doctor per year is spent to influence the medical treatment people get. Senate hearings conclude:

> "Medical education is determined by what the marketing department wants, not what the doctors need."

Drug companies spend 31 million dollars per year to lobby lawmakers. Additional monies are spent on research projects and drug trials. The drug companies have even gone so far as to give away 1,000 frequent flier miles for every prescription written! (Company: Wyeth-Ayerst, Product: INDERAL, Source: 1989 Massachusetts criminal investigation into doctor bribery, Outcome: Wyeth-Ayerst paid Massachusetts $197,000 and discontinued program).

Doctors and hospitals aren't the only ones to benefit. According to Ed McCabe, author of O3 vs. AIDS (from which much of this material is taken):

> "The drug/allopathic medical industry is one of the top contributors to almost every political campaign."

In a previous article, I quoted from the preliminary findings of a Canadian study as reported in the Canadian Medical Association Journal by the Surgeon General of the Canadian Armed Forces. I recently found out that the study was never finished, even though all results were highly positive. (For those that missed it, the study had to do with the ability of ozone to "clean-up" the blood supply by inactivating (killing) HIV, and several other viral contaminates.)

Why was the work never completed?

It seems that the manufacturer of AZT bought the lab where the study was taking place and canceled it, redirecting all researchers to AZT related work. Is it mere coincidence that if, as expected, the final report proved the effectiveness of ozone it would:

1) Provide a means to dramatically reduce, if not entirely eliminate, transfusion related AIDS transmission, thus cutting down on the number of new AIDS patients (AZT customers).

2) Bring ozone and other related oxygen therapies into the mainstream, likely resulting in more serious (officially sanctioned) investigations into their effectiveness on patients.

3) Result in the recognition of oxygen therapy as an effective means of treating some conditions, thus opening the door for its more widespread use.

Is the FDA any better?

Not according to Dr. Herbert Ley, who was FDA Commissioner from 1968-1969, and subsequently spilled the beans in an interview with San Francisco Chronicle newspaper:

> "The FDA 'protects' the big drug companies and is subsequently rewarded, and , using the government's police powers, they attack those who threaten the big drug companies".

The September 1991 issue of The National Health Federation's "Health Freedom News" contained an article calling for Congressional investigation of the FDA. It exposed why the FDA is non-responsive in allowing innovation:

> "The beneficiaries of these FDA policies are the pharmaceutical industry and pharmacists, physicians, hospitals - and morticians - not the public... There is conclusive evidence that more than 150 top FDA officials own shares of pharmaceutical-company stock... the skewed policies of the FDA are heavily influenced by that fact."

The proponents of oxygen therapy claim that it can effectively treat a wide spectrum of conditions, including heart disease, arthritis, asthma, cancer, diabetes, MS and virtually all infectious diseases. If official studies verified only a small number of these claims, the world's drug companies would take a big hit financially. According to the Seattle Times of January 3, 1993:

> "The pharmaceutical industry earns $55 billion per year, and is the most profitable business in America".

The December 16, 1991 Barron's magazine states:

> "The tax supported NIH AIDS budget rose to $851 million dollars, up from zero dollars 10 years ago. As of August 1991, the manufacturer of AZT took in $315 million dollars in sales of it."

Does anybody have a vested interest in maintaining the status quo?

Oxygen therapies are cheap. Whether its the electricity to produce ozone or commercially available 35% solutions of hydrogen peroxide, we're talking pennies on the dollar compared to the average prescription drug. Father Richard Willhelm, one the earliest modern-day advocates of oxygen therapies described his experience with one of America's drug companies:

> " We went to the headquarters of a large pharmaceutical firm. I told them about hydrogen peroxide and gave them one of my pamphlets. Their spokesman said, "Father, I might as well be honest with you. You have to remember that we are a commercial venture. I can see no commercial value whatsoever in finding that hydrogen peroxide cures anything. You just can't make any money out of it."

There is a presumption shared by most researchers that the field is reasonably level, with new ideas being evaluated mostly on their merits. I hate to bust any bubbles, but that's just not the case. There are those who are using their vast resources to suppress what they must consider a serious threat to their fortunes. Ed McCabe's "O3 vs AIDS" documents several such crimes. The next time you, or an associate, wants to know

> "Well, if its so good, why haven't I heard about it before?",

ask yourself this: What would you do to keep a 55 billion dollar per year cash cow alive? Would you attempt to control the flow of information or the direction of research? Would you attempt to interfere with the fair evaluation of the competition or make its use illegal? Would you let people die because there was no profit in it for you?

A WORLD WITHOUT CANCER -
The Story of Vitamin B17 (Laetrile)
By G. Edward Griffin
http://www.worldwithoutcancer.org.uk/aworldwithoutcancer.html

G. Edward Griffin marshals the evidence that cancer is a deficiency disease-like scurvy or pellagra-aggravated by the lack of an essential food compound in modern man's diet. That substance is vitamin B17. In its purified form developed for cancer therapy, it is known as Laetrile. This story is not approved by orthodox medicine. The FDA, the AMA, and The American Cancer Society have labeled it fraud and quackery. Yet the evidence is clear that here, at last, is the final answer to the cancer riddle. Why has orthodox medicine waged war against this non-drug approach? The author contends that the answer is to be found, not in science, but in politics - and is based upon the hidden economic and power agenda of those who dominate the medical establishment. With billions of dollars spent each year on research, with other billions taken in on the sale of cancer-related drugs, and with fund-raising at an all-time high, there are now more people making a living from cancer than dying from it. If the solution should be found in a simple vitamin, this gigantic industry could be wiped out overnight. The result is that the politics of cancer therapy is more complicated than the science. WORLD WITHOUT CANCER blazes the trail into unexplored territory and reveals how science has been subverted to protect entrenched commercial interests. It delivers the kind of impact that could topple an empire; and perhaps it will.

* * *

Introduction

During 1950 after many years of research, a dedicated biochemist by the name of Dr. Ernest T. Krebs, Jr., isolated a new vitamin that he numbered B-17 and called 'Laetrile'. As the years rolled by, thousands became convinced that Krebs had finally found the complete control for all cancers, a conviction that even more people share today. Back in 1950 Ernest Krebs could have had little idea of the hornet's nest he was about to stir up. The pharmaceutical multinationals, unable to patent or claim exclusive rights to the vitamin, launched a propaganda attack of unprecedented viciousness against B-17, despite the fact that hard proof of its efficiency in controlling all forms of cancer surrounds us in overwhelming abundance. Why has orthodox medicine waged war against this non-drug approach? G. Edward Griffin, author of the book, World Without Cancer contends that the answer is to be found not in science, but in politics, and is based upon the hidden economic and power agenda of those who dominate the medical establishment.

Each year, thousands of Americans travel to Mexico to receive vitamin B-17 (Laetrile) therapy. They do this because it has been suppressed in the United States. Most of these patients have been told that their cancer is terminal and that they have but a few months to live. Yet, an incredible percentage of them have recovered and they are living normal lives (see success stories). However, the FDA, the AMA, the American Cancer Society, and the cancer research centres continue to pronounce that Laetrile is fraud and quackery. The recovered patients, they say, either had "spontaneous remissions" or never had cancer in the first place. If any of these people ultimately die after seeking Laetrile, spokesmen of orthodox medicine are quick to proclaim: "You see? Laetrile doesn't work!" Meanwhile, hundreds of thousands of patients die each year after undergoing surgery, radiation, or chemotherapy, but those treatments continue to be touted as "safe and effective".

In the U.S. the FDA has tried to use strict regulations, not law, to ban vitamin B-17 for over 18 years. Vitamin B-17, or Laetrile Therapy is only used by some hospitals in Mexico, which treat cancer with nutrition. These hospitals achieve nearly a 100% recovery rate with virgin cases (localised tumours/cancers that have not yet been burned up with radiation, poisoned with chemotherapy, or cut into with surgery). A majority of Laetrile-treated patients report positive responses, ranging from increase in the feeling of well-being and even brighter outlook of life, to such noticeable reactions as an increase in appetite, weight gain and, frequently, restoration of natural colour, reduction or elimination of cancer-connected pain and cancer-caused fetor. In thousands of cases, total regression of all cancer symptoms has been confirmed.

Vitamin B-17, commonly known as "Amygdalin", or "Laetrile", is a natural substance that can be found in a variety of species in the Vegetable kingdom. The greatest concentration is found in the seeds of the rosaceous fruits, such as apricot kernels and other bitter nuts. There are many seeds, cereals and vegetables that contain minimal quantities of vitamin B-17 and form part of our daily diet.

With great satisfaction we are proud to present this vegetable agent whose anti-cancer properties have been known empirically for many years, but in the last twenty years they have been scientifically proven, primarily through the clinical studies directed by Dr. Ernesto Contreras Rodriguez and carried out in the OASIS of Hope Hospital formerly known as the Centro Medico y Hospital Del Mar at Playas de Tijuana, B.C.N. Mexico. More than 100,000 patients have sought Contreras' care since 1963 (see Oasis Success Stories).

The information on this web site will educate you on the benefits of metabolic therapy and prevention. All the food supplements mentioned in this site can be easily obtained by patients who are not able to go to Mexico because of financial reasons, patients who are too weak to travel, and by patients who have already been to these hospitals and need to remain on metabolic therapy. You will be taught how to benefit from metabolic therapy either in Mexico, or at home at a fraction of the cost. You will find information on where to obtain metabolic products in the "contacts" section of this site.

Throughout this web site you will find valuable information such as documents, research, and studies relevant to vitamin B-17, its monographic summary, clinical studies, the biological and chemical descriptions of the destruction of cancer cells by the components of B-17, testimonials, case histories, biographies, bibliographies, photos, graphs, links, and much more. This guide was created to explain the different elements of metabolic therapy and act as a reference when needed during the course of your therapy. Should you have questions, please refer to the "Frequently Asked Questions" section.

Antoine Prioré

Priore process scientific summary

Recommendation for development
(Dr. Evans is listed as one of the top 500 scientists in the world)

http://www.cheniere.org/priore/index.html

In the 1960's and 1970's, in France, Antoine Prioré built and tested electromagnetic healing machines of startling effectiveness.

In hundreds and hundreds of strictly controlled tests with laboratory animals, Prioré's machine cured a wide variety of the most difficult kinds of terminal, fatal diseases known today.

Funded by millions of dollars, Prioré's machines concretely demonstrated a nearly 100% cure of all kinds of terminal cancers and leukemias, in thousands of rigorous laboratory tests with animals. These results were shown to medical scientists as early as 1960.

Supporters and financiers of the Prioré machine included:

- The Prime Minister of France - Jacques Chaban-Delmas
- The World Health Organization.
- Robert Courrier - permanent secretary of the French Academy of Sciences
- Professor Raymond Pautrizel - France's leading Professor of Immunology & Parasitology
- The D.G.R.S.T. - France's top government scientific agency, headed by an M.I.T. trained physicist
- Professor André Lwoff - the 1965 Nobel Prize winner for Medicine
- The French military
- Members of the Faculty of Medicine of the University of Bordeaux
- Cancerologists at the Villejuif Institute for Cancer Research

A Ph.D. was even awarded by the University of Bordeaux in 1984 for a thesis on the research (to Eric Perisse).

In 1974, a change of local government lost Prioré his government supporters, his support and funding were lost, and subsequent attempts to restore his technology into the public domain were viciously suppressed.

Tom Bearden comments:

"It is my impression that the French Government did finally recognize how at least part of the Prioré process worked, and weaponized it as longitudinal EM wave interferometers. In fact every nuclear weapon on the planet, along with every nuclear powerplant, every nuclear propulsion system, etc. can be dudded in about 10 minutes by one class of these weapons."
